DETAILED ACTION

Response to Amendment

Claim Rejections - 35 USC § 112

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, it is unclear as to what "weight" the multiplicand is multiplying.

Also it is unclear as to how the recoding of a multiplier takes place.

Allowable Subject Matter

Claims 4-20 are allowed.

The prior art fails to disclose an apparatus for higher radix binary multiplication of a multiplicand by a multiplier to form a resultant product, the apparatus comprising means for generating a partial product of each secondary digit and the multiplicand, the partial products for the respective secondary digits collectively comprising a first plurality of partial products; and partitioning the first plurality of partial products into a plurality of parts and reducing each part to respective values; and generating a second plurality of partial products, each partial product of the second plurality of partial products comprising the product of a respective value of a respective part and of a term dependent on the respective part and the secondary radix; and for reducing the second plurality of partial products to the resultant product; nor does the prior art disclose the plurality of Booth 4 partial product generator or a plurality of Booth 8 partial product generator selector.

Art Unit: 3661

Response to Arguments

Applicant's arguments with respect to claims 1, 4-20 have been considered but are moot in view of the new ground(s) of rejection.
